Angular

- JavaScript Roadmap
  - Introduction to Angular
    - Angular and History
    - Angular Architecture
    - Setting up a New Project
  - Learn TypeScript Basics
    - Components
      - Component Anatomy
      - Creating Components
      - Metadata
        - Selector
        - Template
        - Styles
        - Standalone
        - Imports
        - Provider
        - viewProvider
        - Encapsulation
        - changeDetection
      - Communication
        - Parent-Child Interaction
        - ViewChild
        - ContentChild
      - Component Lifecycle
      - Dynamic Components
      - Modules
        - Module Architecture
        - Creating Modules
        - Feature Modules
        - Lazy Loading Modules
        - Dependencies
      - Templates
        - Interpolation
        - Template Statements
        - Understand Binding
          - Data Binding
          - Property Binding
          - Attribute Binding
          - Event Binding
          - Two-way Binding
        - Control Flow
        - Template Ref Vars
        - @Input & @Output
        - Template Syntax
          - @if
          - @else
          - @else if
          - @for
          - @switch
          - @case
          - @default
          - @let
          - @defer
        - Pipes
          - Pipes Precedence
          - Change Detection
          - Common Pipes
          - Custom Pipes
        - Directives
          - Structural Directives
          - Attribute Directives
          - Custom Directives
        - Routing
          - Configuration
          - Lazy Loading
          - Router Outlets
          - Router Links
          - Router Events
          - Guards
        - Services & Remote Data
          - Dependency Injection
          - HTTP Client
            - Setting Up the Client
            - Making Requests
            - Writing Interceptors
            - RxJS Basics
              - Observable Pattern
              - Observable Lifecycle
              - RxJS vs Promises
              - Operators
                - Filtering
                - Rate Limiting
                - Transformation
                - Combination
              - Signals
                - RxJS Interop
                - Inputs as Signals
                - Queries as Signals
                - Model Inputs
              - State Management
                - NGXS
                - Elf
                - NgRx
            - Forms
              - Reactive Forms
              - Typed Forms
              - Template-driven Forms
              - Dynamic Forms
              - Custom Validators
              - Control Value Accessor
              - Zones
                - Zoneless Applications
              - Developer Tools
                - Angular CLI
                - Local Setup
                - Deployment
                - End-to-End Testing
                - Schematics
                - Build Environments
                - CLI Builders
                - AoT Compilation
                - DevTools
                - Language Service
                - Libraries
                - Using Libraries
                - Creating Libraries
              - SSR
                - SSG
                - AnalogJS
                - Security
                - Cross-site Scripting
                - Sanitization
                - Trusting Safe Values
                - Enforce Trusted Types
                - HTTP Vulnerabilities
                - Cross-site Request Forgery
                - HttpClient CSRF
                - XSRF protection
                - Cross-site Script Inclusion
                - Accessibility
                - Attributes
                - UI Components
                - Containers
                - Routing
                - Link Identification
                - Performance
                - Deferrable Views
                - Image Optimization
                - Zone Pollution
                - Slow Computations
                - Hydration
                - Testing
                - Testing Services
                - Testing Pipes
                - Testing Requests
                - Testing Directives
                - Services with Dependencies
                - Component Bindings
                - Debugging Tests
                - Component Templates
                - Code Coverage
                - Internationalization
                - Localize Package
                - Locales by ID
                - Translation Files
                - Multiple Locales
                - Animation
                - Transitions & Triggers
                - Complex Sequences
                - Reusable Animations
                - Route Transitions
